

Niner

Cosmic Cycles

The Big Bang ignited sparge of stars.
From energy God Particles bammed
to create matter, stars and then us.
Somehow light glimmered from the darkness.
Somehow matter glommed from particles.
But some day stars will die out–no light.
Our universe will be dark and cold.
When the sparkle darkles, somehow we
wormhole to another universe.

Niner:

1. Invented by Ann Silsbee
2. Nine lines.
3. Nine syllables per line.
